Gabriel Santos

Full Stack Developer · Next.js · React · Node.js · NestJS · TypeScript · PostgreSQL

Salvador, Brazil · Remote · gabriel.dev969@gmail.com · linkedin.com/in/gabriel-santos-b53632196 · github.com/GabrielDev969 · gabrieldev969.github.io/Portfolio

SUMMARY

Full Stack Developer with about 5 years of experience: 4 as a Systems Analyst and over 1 working remotely. I build complete products, from the database to the interface, with Next.js, React, Node.js, NestJS and PostgreSQL. I use AI coding agents daily without giving up technical judgment, and I am pursuing a postgraduate degree in Software Engineering for Applied AI.

EXPERIENCE

Full Stack Developer · **Group Wave Enterprise** — Remote · Aug 2025 – Present

- **Sistema Wave:** I work across every area of the internal platform about 100 people use to publish 500+ campaigns a day to Meta through its API, with AI creative editing and copy generation, cross-team requests (ClickUp-style) and dashboards for campaigns, finance and company health.
- Monitoring with Prometheus, Grafana and Telegram alerts; security and stress tests, and Jenkins CI that only approves changes that pass the tests.
- **Campaign BI** (designed and built end to end): n8n → RabbitMQ → parallel NestJS workers → PostgreSQL, with a Next.js app and Google sign-in. Hourly data instead of waiting 45 min–2 h for a CSV; used daily by owners, finance and squad leads.
- Retries with no data loss, idempotency by RedTrack ID, and a largest-remainder script that fixed inflated metrics.

Consultant & Software Developer (contract) · **IA Robots Solutions** — 2025 – Present

- Setup and operation of OrionStar service robots, and development of **Hostly**, a multi-company platform in use: my own Kotlin Android app replaces the factory app and plays campaigns, music and spoken lines scheduled on a web panel, plus ads on LED screens, including at events.
- Next.js, NestJS, PostgreSQL, Redis, BullMQ and FFmpeg on Docker Compose on a VPS; works offline (versioned manifest and cache) and isolates each organization in the API and database.
- Security: deny-by-default API, two-factor auth, HMAC-signed audit log, signed URLs, VPN-only deploys and encrypted backups. I wrote the spec and build it with AI agents in parallel, with unit, e2e and contract tests in CI.

Systems Analyst · **Fator Sistemas & Consultorias** — Salvador, Brazil · Sep 2021 – Aug 2025

- Built and maintained Node.js backends and Angular frontends with JavaScript and TypeScript.
- Optimized report SQL queries, tuned Firebird, and migrated data from PostgreSQL and MySQL into Firebird.

PERSONAL PROJECT

Zibby · launched Oct 2026 — multi-store e-commerce: storefront, admin panel with products and sales dashboards, and Stripe payments. Modular monolith in a pnpm monorepo (NestJS, Next.js, PostgreSQL with Prisma), integrations as providers (Stripe, Resend), Clarity and a per-store Meta Pixel, encrypted data and keys, tests, and a VPS with backups.

TECHNICAL SKILLS

Frontend & mobile	Next.js, React, TypeScript, JavaScript, Angular · Kotlin (Android)
Backend	Node.js, NestJS, Express, REST APIs, Swagger, WebSocket, RabbitMQ, BullMQ · Spring Boot, Django
Data	PostgreSQL, MySQL, MongoDB, Redis, Firebird, Prisma · RedTrack, Meta API, Stripe
DevOps	Docker, AWS, Git, Jenkins, VPS · Prometheus, Grafana · n8n
Architecture	Clean Architecture, SOLID, TDD, modular monolith, multi-tenant, microservices

EDUCATION

Postgraduate Degree in Software Engineering for Applied AI
UNIPDS · 2026 – 2027 (in progress)

B.Sc. in Computer Science
UNIFACS, Salvador · 2021 – 2025

CERTIFICATIONS

Node.js Training · Udemy, 2023 · NLW Unite – Java · Rocketseat, 2024 · Python & Django · Udemy, 2023 · TypeScript · Udemy, 2022

LANGUAGES

Portuguese (native) · Spanish and English (basic, studying)
